

Animal Report (Koala)

5D (4) Cheung Kwan Shun, Maxson

Introduction

Koala are mammals.

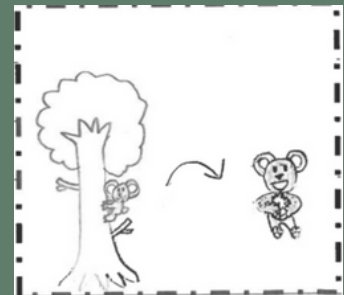

Appearance

Koalas have two cheeks, big ears and a big nose. Their length is 63-75 cm. They also have sharp teeth to help eat tree barks.

Habitat

Koalas live on the east coast of Australia. They live and sleep in eucalyptus trees.

Diet

Koalas are herbivores. They eat leaves, barks, fruit and flowers. They eat 0.45 kg of leaves per day to stay healthy.

Behaviour

Koalas move to different trees every day. They sleep up to 19 hours a day.

Interesting Facts

Koala is not a bear.

Summary

Koalas are endangered. If people continue to do so, they will become extinct.
